

TANNU JHA

DevOps Engineer | Cloud Infrastructure | AWS | GCP | Kubernetes | CI/CD

[LinkedIn](#) | [GitHub](#) | tannujha0610@gmail.com | +91 8700808231 | Gurugram, India | Open to relocation

SUMMARY

Infrastructure and cloud engineer with hands-on experience in AWS and GCP, Terraform-based IaC, Kubernetes, Docker, and CI/CD pipelines. Built production-grade multi-AZ environments from scratch, configured Prometheus and Grafana observability stacks, and enforced IAM security best practices. Networking background in TCP/IP, VPN, and routing feeds directly into incident response and platform reliability work. Currently pursuing CKA. Looking to bring this background into a full-time DevOps role where reliability, automation, and clean infrastructure are what matter.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, VPC, RDS, ALB, Auto Scaling, CloudWatch, IAM) | GCP (Compute Engine, VPC, IAM)

Containerization and Orchestration: Docker, Kubernetes (CKA in progress), Helm awareness, ECS/EKS awareness

Infrastructure as Code: Terraform (multi-AZ, production-grade), OpenTofu (basics), CloudFormation awareness, ARM Templates awareness

CI/CD: GitHub Actions, Jenkins awareness, Azure DevOps awareness, automated deployment pipelines, version-controlled workflows

Observability: Prometheus, Grafana, CloudWatch (dashboards, metric alarms, SNS alerting), ELK awareness, log-based monitoring

Configuration Management: Ansible awareness, Chef awareness, environment standardization

Scripting and Source Control: Bash, Python (basics), Git

Networking: TCP/IP, IPv4/IPv6, DNS, load balancing, VPN, MPLS, SD-WAN, routing, firewalls, Cisco, Juniper

Security and Compliance: Least-privilege IAM, secrets management, network segmentation, ISO 27001 / GDPR / PCI-DSS awareness

Documentation: Runbooks, incident logs, technical specifications, configuration records

WORK EXPERIENCE

Network Engineer | Colt Technology Services | Gurugram, India

Aug 2024 - Present

- **CI/CD and release discipline:** Delivered repeatable, documented change workflows in a high-volume 24/7 global environment, applying the same version-control and deployment discipline expected in DevOps pipelines.
- **Cloud networking and infrastructure:** Provisioned and validated Internet, MPLS, and SD-WAN connectivity across multi-vendor environments, managing IPv4/IPv6 allocation, DNS, VPN configurations, and routing for enterprise customers.
- **Incident response and troubleshooting:** Investigated and resolved connectivity and performance issues under SLA constraints using structured diagnostic workflows - skills that transfer directly to on-call production support.
- **Security best practices:** Applied least-privilege access controls, network segmentation, and change-approval processes aligned with ISO 27001 and PCI-DSS compliance requirements.
- **Cross-functional collaboration:** Coordinated platform changes with regional teams across time zones, mirroring the developer-ops-security collaboration expected in an Agile DevOps culture.
- **Runbooks and documentation:** Maintained configuration records, incident logs, and knowledge-base articles to support audit readiness and reduce mean time to resolve.

PROJECTS

Scalable Cloud Infrastructure with Terraform [GitHub](#) | [Architecture Diagram](#)

- **Infrastructure as Code:** Designed and deployed a production-grade multi-AZ AWS environment using Terraform: VPC, EC2 with Auto Scaling, Application Load Balancer, RDS, and IAM with least-privilege policies.
- **CI/CD pipeline:** Built a GitHub Actions pipeline that provisions infrastructure end to end in under 20 seconds per run with no manual steps.
- **Observability:** Configured CloudWatch dashboards, metric alarms, and SNS notifications for proactive issue detection before user impact - same pattern used with Prometheus and Grafana.
- **Security and compliance:** Enforced least-privilege IAM across all resources, version-controlled Terraform state, and applied consistent tagging and policy controls to reduce configuration drift.

EDUCATION

B.Tech, Electronics and Communication Engineering

Jul 2020 - Jul 2024

Guru Gobind Singh Indraprastha University, New Delhi | CGPA: 8.35 / 10

CERTIFICATIONS AND LEARNING

- Certified Kubernetes Administrator (CKA) - actively pursuing
- AWS Certified Solutions Architect - Associate (SAA-C03) - in progress
- GCP Fundamentals: Compute Engine, IAM, VPC - completed

LANGUAGES

English: Fluent | **German:** B1 (intermediate)
